

SC21 SCC Team Profile

Team GeekPie_HPC
ShanghaiTech University

1 WHAT IS THE NAME OF YOUR TEAM AND WHY DID YOU CHOOSE IT?

Our team is called GeekPie_HPC. GeekPie_ is a large comprehensive student association in our school attracting science enthusiasts of different backgrounds. The underscore simulates a blinking cursor in the command line. The association has various branches like GeekPie_Robotics, GeekPie_Security and GeekPie_DevOps. We are the HPC branch, so our teamname is GeekPie_HPC.

2 WHY DO YOU THINK YOUR TEAM WILL HAVE AN EDGE IN THE EVENT (WHAT'S YOUR SECRET SAUCE)?

This year, we have gain a ton of experience in Cloud Administration that nobody is stealing computation power from you. We've invited much of DevOps guys into the teams to maintain the machine, from slack caution by feed from slurm to deploying faster BeeGFS. We've digged into the source code of Quantum-Espresso and Cardiod, so that no other team can have better knowledge of us.

By the way, both Jiajie and Harry Chen have graduated, how could we fear THU, haha!

3 WHAT HAVE YOU DONE TO PREPARE THAT MAKES YOUR TEAM UNIQUE?

Most of our team members have taken the Parallel Computing course and learned a bunch of parallel algorithms. We hold group meetings periodically to gain more knowledge from each other and enjoy some spicy potato chips.

We also proved our team is unique: As the competition rule stated, each member can participate in at most one team. Conversely, if any two picked teams share any member, then they must be the same team. As far as the uniqueness of human individuals is admitted, the uniqueness of any team is trivially induced.

4 WHAT ARE YOU MOST LOOKING FORWARD TO IN THE COMPETITION?

Championship! And breaking records!

5 WHAT TIME ZONE IS YOUR TEAM COMPETING FROM?

Our teaming is competing from UTC+8, which is also known as **Beijing Time**. It's TZ database¹ name is Asia/Shanghai.

6 WHAT DO YOUR TEAM MEMBERS DO FOR FUN?

- (1) Do some magic TYPESETTING with L^AT_EX.
- (2) Do some High Frequency Trading in Solana and lose a ton of money.

- (3) Do some Hackintosh and found Open core default ACPI driver automatically run on our machine.
- (4) Do some cargo fuzz on Filesystem and found no bugs.

Figure 1: The Configuration of Our System

7 IF YOUR TEAM HAD A THEME SONG, WHAT WOULD IT BE?

We love J-Pop so much. "Marigold" (マリーゴールド) is the fifth single of Aimeyon, and was preleased on August 8, 2018.

8 CAN YOU SHARE AN INTERESTING FACT ABOUT YOUR TEAM?

- (1) Our developing Operating System includes all main-stream OS, such as Windows 11, FreeBSD 11, Hackintosh Big Sur, debian/ubuntu[•] and Archlinux.
- (2) Our main IDE is CLion. We hope Apple could buy JetBrains so that XCode would be better to use.
- (3)
